

Washington State Community Planners views on Consultation Zones

**Report for the Pipeline Safety Trust
Social Marketing Communication
Model Grant Project**

- Prepared by Applied Research Northwest, May 2010

Research Methods

- Target population: Washington State city and county planners
- Email contacts with web-survey link and unique login code
- Total qualified respondents N=85 (49% response rate)
- Survey included approximately 35 questions

Findings: Awareness

As far as you know, are there any transmission pipelines operating through or immediately adjacent to your jurisdiction?

N=93

Findings: Awareness

Are there currently accurate, up-to-date maps available to your planning department that show where the pipelines are in your community?

N=85

Findings: Awareness

How well are transmission pipelines in your community marked, so developers and property owners know where they are?

N=85

Findings: Awareness

In your day to day work, how often do you encounter issues relating to transmission pipelines or pipeline safety?

Findings: Awareness

How often has the growth of your community brought roadways, housing, business and industry within close proximity to pipelines in your community?

Findings: Awareness

How effective has 'Call Before You Dig' been in preventing damage to underground utilities in your community?

N=83

Findings: Awareness

- 45% have additional protocols besides Call Before You Dig
 - Focus is primarily on notification of utilities and sometimes safety personnel (e.g. fire department)
 - Documentation emphasized on plans, locating existing utilities, and some use review processes
 - Three require notification of pipeline companies with some additional consultation mentioned in two of the three cases

Findings: CZ Effectiveness

How would you describe the planning department's relationship with Pipeline Operators in your area?

N=83

Findings: CZ Effectiveness

Do you think Consultation Zones would be any more effective than what your community currently does to take pipeline safety into consideration?

Findings: CZ Effectiveness

Whether or not you think they would be more effective, how willing would you be to propose adoption of Consultation Zones for your community within the next two years?

Findings: Consultation Zone Size

How likely are you to consider adopting Consultation Zones using the recommended 660' area?

N=83

Findings: Time to adoption

- Most planners said that it would take up to a year to adopt Consultation Zones (71%).
- 92% thought it could be done in 2 years.
- The range for adoption was from 1 month to 96 months.
- In addition 95% have visited the MRSC website before.

Findings: Consultation Zone Size

How likely to consider proposing Consultation Zones if 660' area were changed to be...

Findings: Barriers

How likely are the following to be barriers to implementing Consultation Zones?

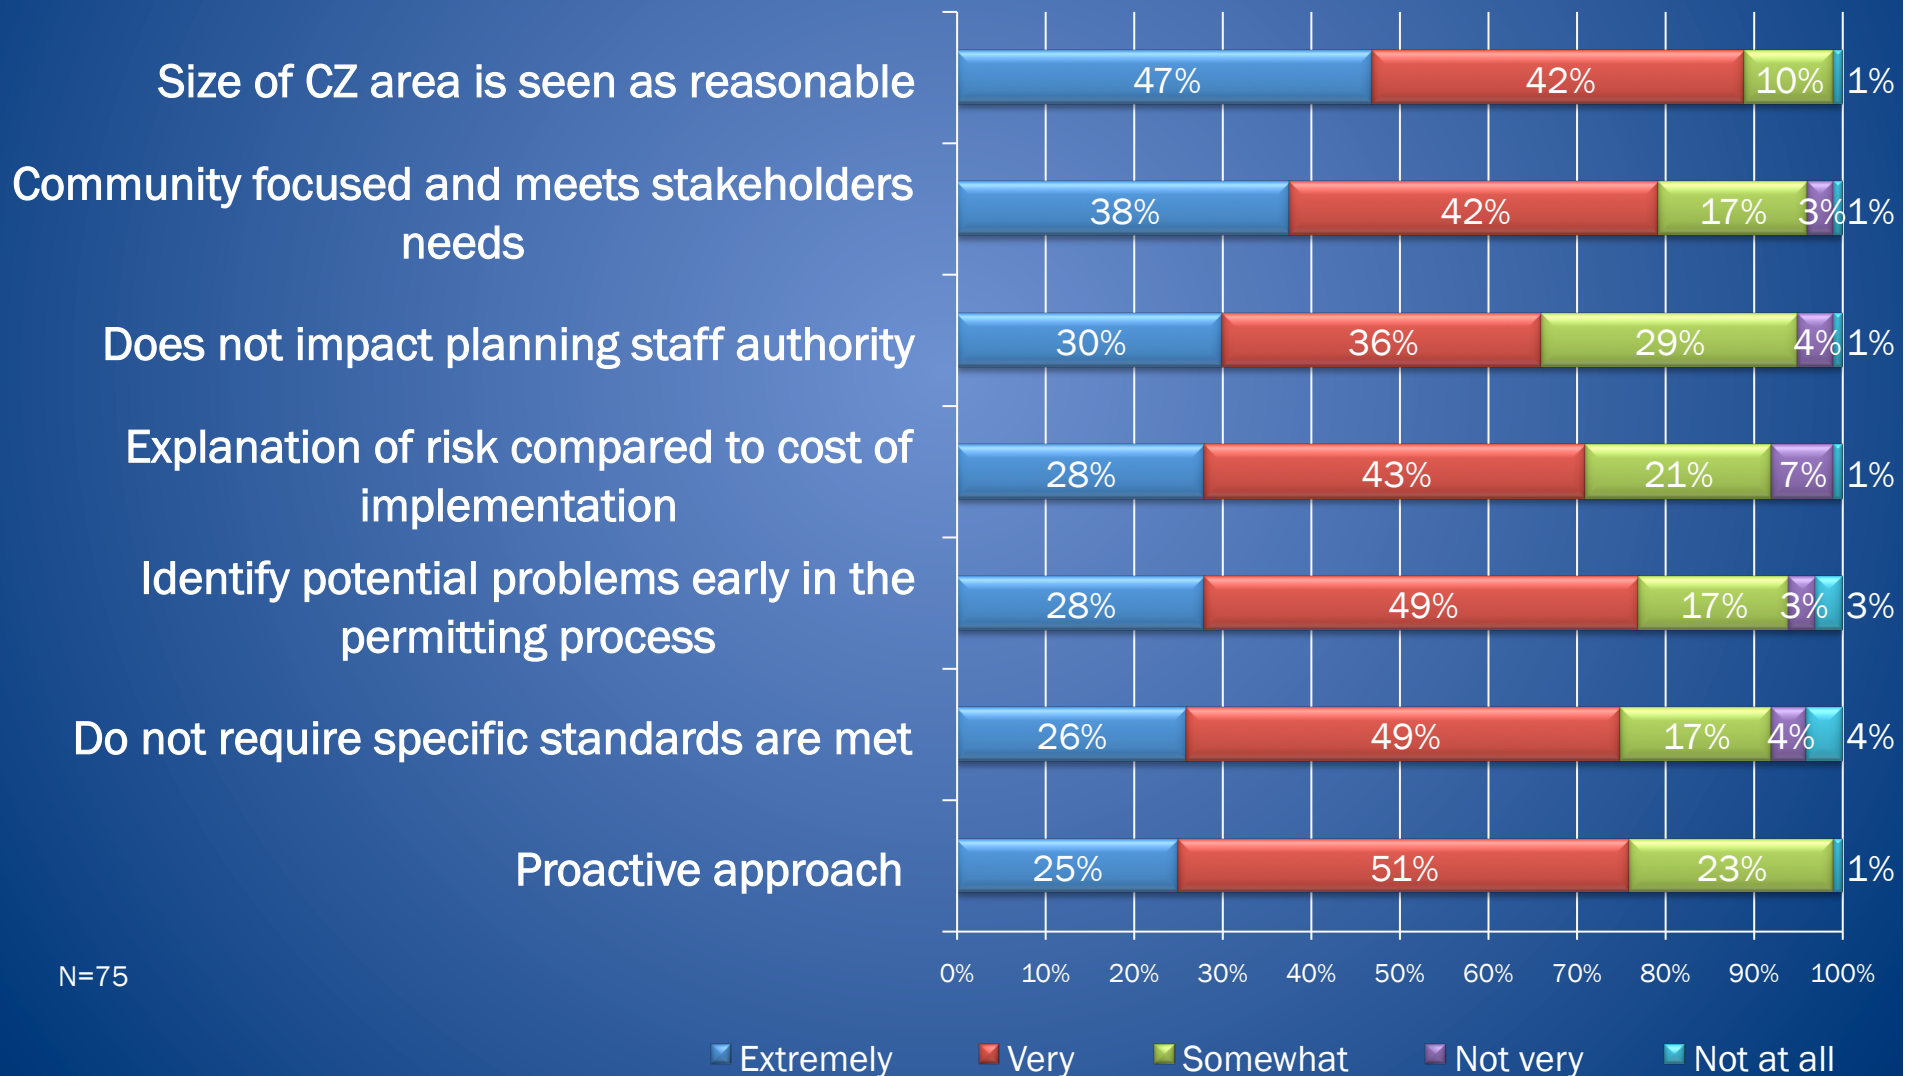

Findings: Incentives

How valuable are the following incentives for implementing Consultation Zones?

Findings: Messaging

Importance of Consultation Zone beliefs and knowledge items

Findings: Messaging

Importance of Consultation Zone beliefs and knowledge items (potential message-related content)

Findings: Messengers

Who do you trust most to provide helpful and accurate information about implementing Consultation Zones? (N=79)

Findings: Messengers

Who do you trust most to provide accurate information about pipeline risks? (N=79)

Findings: Channels

Sources of information about zoning and planning initiatives (N=79)
